

NAG C Library Function Document

nag_tsa_multi_diff (g13dlc)

1 Purpose

nag_tsa_multi_diff (g13dlc) differences and/or transforms a multivariate time series.

2 Specification

```
void nag_tsa_multi_diff (Integer k, Integer n, const double z[], const Integer tr[],
    const Integer id[], const double delta[], double w[], Integer *nd,
    NagError *fail)
```

3 Description

For certain time series it may first be necessary to difference the original data to obtain a stationary series before calculating autocorrelations, etc. This routine also allows the user to apply either a square root or a log transformation to the original time series to stabilize the variance if required.

If the order of differencing required for the i th series is d_i , then the differencing operator is defined by $\delta_i(B) = 1 - \delta_{i1}B - \delta_{i2}B^2 - \dots - \delta_{id_i}B^{d_i}$, where B is the backward shift operator; that is, $BZ_t = Z_{t-1}$. Let d denote the maximum of the orders of differencing, d_i , over the k series. The routine computes values of the differenced/transformed series $W_t = (w_{1t}, w_{2t}, \dots, w_{kt})^T$ for $t = d + 1, d + 2, \dots, n$ as follows:

$$w_{it} = \delta_i(B)z_{it}^*, \quad i = 1, 2, \dots, k$$

where z_{it}^* are the transformed values of the original k -dimensional time series $Z_t = (z_{1t}, z_{2t}, \dots, z_{kt})^T$.

The differencing parameters δ_{ij} , for $i = 1, 2, \dots, k$; $j = 1, 2, \dots, d_i$ must be supplied by the user. If the i th series does not require differencing, then $d_i = 0$.

5 Parameters

- | | |
|---|--------------|
| 1: k – Integer | <i>Input</i> |
| <i>On entry:</i> the dimension, k , of the multivariate time series. | |
| <i>Constraint:</i> $\mathbf{k} \geq 1$. | |
| 2: n – Integer | <i>Input</i> |
| <i>On entry:</i> the number, n , of observations in the series, prior to differencing. | |
| <i>Constraint:</i> $\mathbf{n} \geq 1$. | |
| 3: z[dim] – const double | <i>Input</i> |
| Note: the dimension, dim , of the array z must be at least $\mathbf{k} \times \mathbf{n}$. | |
| <i>On entry:</i> z $[(t-1)k+i-1]$ must contain the i th series at time t , for $t = 1, 2, \dots, n$; $i = 1, 2, \dots, k$. | |

4:	tr [k] – const Integer	<i>Input</i>
<i>On entry:</i> tr [<i>i</i> – 1] indicates whether the <i>i</i> th series is to be transformed, for $i = 1, 2, \dots, k$.		
If tr [<i>i</i>] = –1, a square root transformation is used.		
If tr [<i>i</i>] = 0, no transformation is used.		
If tr [<i>i</i>] = 1, a log transformation is used.		
<i>Constraint:</i> tr [<i>i</i>] = –1, 0 or 1 for $i = 0, 1, \dots, \mathbf{k} – 1$.		
5:	id [k] – const Integer	<i>Input</i>
<i>On entry:</i> the order of differencing for each series, d_1, d_2, \dots, d_k with $d = \max(\mathbf{id}[i])$, for $i = 0, 1, \dots, k – 1$.		
<i>Constraint:</i> $0 \leq \mathbf{id}[i] < \mathbf{n}$ for $i = 0, 1, \dots, \mathbf{k} – 1$.		
6:	delta [<i>dim</i>] – const double	<i>Input</i>
Note: the dimension, <i>dim</i> , of the array delta must be at least $\max(1, k \times d)$.		
<i>On entry:</i> if id [<i>i</i> – 1] > 0 then delta [(<i>j</i> – 1) <i>k</i> + <i>i</i> – 1] must be set to δ_{ij} , for $j = 1, 2, \dots, d_i$; $i = 1, 2, \dots, k$.		
7:	w [<i>dim</i>] – double	<i>Output</i>
Note: the dimension, <i>dim</i> , of the array w must be at least $k \times (n – d)$.		
<i>On exit:</i> w [(<i>t</i> – 1) <i>k</i> + <i>i</i> – 1] contains the value of $w_{i,t+d}$, for $i = 1, 2, \dots, k$; $t = 1, 2, \dots, n – d$.		
8:	nd – Integer *	<i>Output</i>
<i>On exit:</i> the number of differenced values, $n – d$, in the series.		
9:	fail – NagError *	<i>Input/Output</i>
The NAG error parameter (see the Essential Introduction).		

6 Error Indicators and Warnings

NE_INT

On entry, **k** = *<value>*.
 Constraint: **k** ≥ 1 .

On entry, **n** = *<value>*.
 Constraint: **n** ≥ 1 .

NE_INT_ARRAY

On entry, **tr**[*i*]**id**[*i*] = *<value>*.
 Constraint: **tr**[*i*] = –1, 0 or 1 for $i = 0, \dots, \mathbf{k} – 1$.

On entry, **tr**[*i*]**id**[*i*] = *<value>*.
 Constraint: $0 \leq \mathbf{id}[i] < \mathbf{n}$ for $i = 0, \dots, \mathbf{k} – 1$.

NE_INT_ARRAY_ELEM_CONS

On entry, element *<value>* of **id** is greater than or equal to **n**.

On entry, element *<value>* of **id** is less than zero.

NE_TRANSFORMATION

On entry, one (or more) of the transformations requested is invalid.

NE_ALLOC_FAIL

Memory allocation failed.

NE_BAD_PARAM

On entry, parameter $\langle value \rangle$ had an illegal value.

NE_INTERNAL_ERROR

An internal error has occurred in this function. Check the function call and any array sizes. If the call is correct then please consult NAG for assistance.

7 Accuracy

The computations are believed to be stable.

8 Further Comments

The same differencing operator does not have to be applied to all the series. For example, suppose we have $k = 2$, and wish to apply the second-order differencing operator ∇^2 to the first series and the first-order differencing operator ∇ to the second series:

$$w_{1t} = \nabla^2 z_{1t} = (1 - B)^2 z_{1t} = (1 - 2B + B^2)z_{1t}, \quad \text{and}$$

$$w_{2t} = \nabla z_{2t} = (1 - B)z_{2t}.$$

Then $d_1 = 2, d_2 = 1, d = \max(d_1, d_2) = 2$, and

$$\mathbf{\deltaelta} = \begin{bmatrix} \delta_{11} & \delta_{12} \\ \delta_{21} & 0 \end{bmatrix} = \begin{bmatrix} 2 & -1 \\ 1 & 0 \end{bmatrix}.$$

9 Example

A program to difference (nonseasonally) each of two time series of length 48. No transformation is to be applied to either of the series.
